

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): An information processing device comprising:  
storage means for storing content data of predetermined content; and  
display control means for controlling display of the predetermined content based on  
the stored content data,

wherein:

the predetermined content is divided into a plurality of blocks to be consecutively  
displayed, and the content data includes positional data which relates to the blocks and which  
is for setting a position of a subsequent block ~~described~~ relative to the position of a previous  
block; and

said display control means controls the display of the predetermined content by, based  
on the positional data, sequentially controlling display of one predetermined block in a  
predetermined position in units of the blocks, said positional data including data that  
describes the position of the subsequent block in terms relative to the position of the previous  
block.

Claim 2 (Original): An information processing device according to claim 1, wherein  
said display control means controls two different screens, and in said display control means,  
display of the content based on the content data on one screen is controlled, and display on  
the other screen of content formed by enlarging the predetermined block in the predetermined  
content is controlled.

Claim 3 (Original): An information processing device according to claim 1, wherein,  
when enlargement is directed for the predetermined block, said display control means

extracts pieces of the content data which relate to the predetermined block for which the enlargement is directed, and controls content based on the pieces of the content data so as to be displayed at a predetermined magnification.

Claim 4 (Currently Amended): An information processing method comprising:

a storage control step for controlling storage of content data of predetermined content;

and

a display control step for controlling, based on the content data in which the storage thereof is controlled in said storage control step, display of the predetermined content,

wherein:

the predetermined content is divided into a plurality of blocks to be consecutively displayed, and the content data includes positional data which relates to the blocks and which is for setting a position of a subsequent block described relative to the position of a previous block; and

in said display control step, the display of the predetermined content is controlled by, based on the positional data, sequentially controlling display of one predetermined block in a predetermined position in units of the blocks, said positional data including data that describes the position of the subsequent block in terms relative to the position of the previous block.

Claim 5 (Currently Amended): A recording medium containing a computer-readable program comprising:

a storage control step for controlling storage of content data of predetermined content; and

a display control step for controlling, based on the content data in which the storage thereof is controlled in said storage control step, display of the predetermined content, wherein:

the predetermined content is divided into a plurality of blocks to be consecutively displayed, and the content data includes positional data which relates to the blocks and which is for setting a position of a subsequent block described relative to the position of a previous block; and

in said display control step, the display of the predetermined content is controlled by, based on the positional data, sequentially controlling display of one predetermined block in a predetermined position in units of the blocks, said positional data including data that describes the position of the subsequent block in terms relative to the position of the previous block.

Claim 6 (Canceled).
